ASTRE project after 27 months from kick-off (partner EAEC)

The Survey

The tracking system measures the benefit and the impact of attendance of e-learning courses, on learners with different motivations and different degree of engagement and supports the quality assurance and strategic planning of the providers. You can download the ASTRE survey tools [here](#)

The Guide

The methodological guide for MOOC providers, which supports them in setting up a permanent tracking system and integrate it, into the quality assurance system of their organisation. The guide addresses MOOC providers that want to implement the tracking system with their own resources and provides step-by-step methodological guidance. You can download the ASTRE Guide [here](#)

Final Conference in Cyprus

The **Final ASTRE Mini Conference** was organized in Cyprus, on the **14th January 2022** and was hosted by the European Association of Erasmus Coordinators (EAEC). During the conference, the partners presented the tracking system for MOOC and e-learning graduates and the results from the tracking system pilots in Spain, Italy, Greece and Germany.

METIS project (partner EACG)

The METIS consortium released the report “Skills and Occupational Profiles for Microelectronics”

This report provides a detailed description of the skills needs of the European microelectronics industry. It describes the main mismatches on the current European microelectronics job market, identifies the most critical microelectronics skills and knowledge from the industry as well as their associated job profiles, and assesses the impact of emerging technologies on skills (I4.0, automotive innovations, etc.).

The report also provides the detailed occupational blueprints of the 21 job profiles the most sought-after by the European microelectronics industry: associated main skills, emerging skills, educational levels, duration to fill positions, etc. It assesses the needs in four specific sectors of the microelectronics industry: semiconductor design, semiconductor manufacturing processes, semiconductor manufacturing equipment and semiconductor materials.

This report also proposes new occupational profiles for microelectronics. It assesses the existing ESCO profiles in microelectronics, identifies the possible new ESCO profiles and presents four specific new ESCO profiles that have been added to the ESCO platform in October 2020.

For more information click [here](#)

Another release of METIS consortium is the report “METIS Skills Strategy” This report identifies the trends, challenges and opportunities associated to the skills needs in the European microelectronics...

Erasmus+ worldwide seminar: higher education opportunities

The EC organized an online seminar about the international higher education opportunities for exchange and cooperation, available under Erasmus+, between the 23 and 25 of November 2021. The event invited stakeholders from the world of higher education, from partner countries across the world.

The videos of all presentations (International Credit Mobility, Erasmus Mundus Joint Masters, Jean Monnet, Marie Skłodowska-Curie, and Capacity Building) are [here](#)
